-

1 Before you start

Three things have to be true before anyone can use the system.

An account

Created for you by an administrator. You cannot register yourself.

A working email

Every sign-in sends a passcode to the address on your account. If you cannot read that mailbox, you cannot sign in — see §15.

The system address

Given to you by your administrator. It changes if the server moves.

Use a phone for scanning.

The QR scanner needs the camera, and browsers only release the camera over a secure `https://` address. If you open the system by plain `http://` the rest works normally but the scanner will not start — type the reference instead.

2 Signing in

Signing in takes two steps: your password, then a passcode sent to your email.
Entering the correct password alone does *not* sign you in.

1

Enter your username and password, then choose **Sign In**.

2

Check your email for a **6-digit passcode**. It arrives within a few seconds.

3

Type the passcode on the verification page. You are now signed in.

The rules that apply

Passcode length	6 digits
Passcode validity	10 minutes
Wrong passcode attempts	5, then the code is cancelled
Wait between resends	60 seconds
Time to finish signing in	15 minutes
Wrong passwords before lockout	5 within 10 minutes
Signed out after inactivity	30 minutes

If you forget your password

Choose **Forgot password** on the sign-in page and enter your username. A reset link is emailed to you. The link is valid for 30 minutes and works once; requesting another cancels the previous one. You may request a new link every 2 minutes.

If the passcode does not arrive, you cannot get in. The system deliberately refuses to sign you in rather than fall back to the password alone. Wait a minute, check your spam folder, then use **Resend**. If it still does not arrive, your administrator needs to check the address on your account.

3 What each role sees

Your role decides which menu items appear. Everyone can track documents and view relief activity; the differences are in what you can change.

MENU ITEM	ADMINISTRATOR	DEPARTMENT	LOGISTICS	APPROVER
Home, Dashboard, All Documents	✓	✓	✓	✓
Relief Dashboard, Distributions, Relief Reports	✓	✓	✓	✓
Relief Inventory, Evacuation Centers	✓	—	✓	✓
Archived Documents	✓	—	—	✓
User Management, Departments, Mail Test	✓	—	—	—
Approve or reject a document	✓	—	—	✓

Routing can be switched off per person. Administrators, Logistics and Approvers can always route. A Department user routes only if **Can route documents** is ticked on their account. When it is not, the **Route** button appears greyed out with the reason on hover.

4 Finding a document

The Home page is the fastest route to any document. There are two ways in.

Scan the QR code

- 1 Open **Home** and allow camera access when the browser asks.
- 2 Hold the printed routing slip so the QR code fills the frame. Keep steady.
- 3 The document opens as soon as the code is read.

Or type the reference

Enter a tracking number such as **PRS-2026-000006** for an exact match, or part of a title to see a list of matches to choose from.

You only see your own office's documents. Searching or scanning a reference that belongs to another office returns “not available to you” rather than opening it. That is deliberate, not a fault.

5 Creating a document

Administrator

Department

Logistics

Approver

- 1 Go to **All Documents** and choose **New Document**.
- 2 Fill in the **Title**, **Document Type**, **Priority** and, where there is a deadline, a **Due Date**.
- 3 Optionally route it immediately — pick the recipient, the action required, and add remarks. You can leave this blank and route later.
- 4 Attach a file, or paste a cloud link, or both.
- 5 Choose **Save**. The tracking number is issued automatically.

Tracking numbers

The number is built as **OFFICE-YEAR-NUMBER**, where the office part comes from the department that created it — **PRS-2026-000006** for Public Relations Services, **DMS-...** for Digital Media Service, **TMS-...** for Traditional Media Services. An account with no department produces **DOC-...**.

Field reference

Document Type	Memo, Letter, Report, Purchase Request, Relief Manifest, Special Order, ORs/DV, PPMP, Purchase Order, Leave Application, Other
Priority	Low, Normal, High, Urgent
Due Date	Optional. Drives the Overdue flag and the compliance figures
File uploads	PDF, DOC and DOCX only, up to 10 MB each
Cloud links	Up to 20 per document

Attachment or link? Upload the file when it must stay with the record permanently. Use a cloud link for large files, or for working documents that people still edit — the system stores the address, not a copy, so the link always opens the current version.

6 Routing and receiving

Routing hands a document to a named person and tells them what you need from them.

- 1 Open the document and choose **Route**.
- 2 Pick the person under **Route To**.
- 3 Choose the **Action Required** code — this is what the recipient sees first.
- 4 Add remarks if the code alone is not enough, then **Route Document**.

Action codes

FAA	For appropriate action
FYI	For information / reference
MEMO	Memorandum
RA	Request for approval
RD	Request for documents
RP	Request for payment

When a document reaches you

You get a bell notification and an email. Open the document and choose

Acknowledge Receipt — this stamps the time it reached you and lets the sender see it arrived. Until you acknowledge, the document shows as **In Transit**.

Status meanings. **Draft** — created, not yet routed. **Pending Routing** — ready to send. **In Transit** — sent, not yet acknowledged. **Received** — acknowledged, being worked on. **Completed** — finished. **Overdue** — past its due date and not yet completed.

7 Approving and rejecting

Administrator

Approver

Documents that need sign-off carry an approval badge. The buttons appear only while approval is pending.

- 1 Open the document. If it awaits you, **Approve** and **Reject** appear at the top.
- 2 Choose one, and give your reason when asked.
- 3 Route the document onward — back to the owner if rejected, or to the next office.

What happens after a rejection

The document is marked **Rejected** and goes back to the owner, who revises it. When the owner routes the revision back to an approver, the approval reopens automatically and the Approve and Reject buttons return. The rejection stays visible while the document sits with the owner, because that is the signal to revise it.

A rejected document is never a dead end. Revise, route it back to an approver, and it can be approved on the next pass. A document cannot be marked completed while approval is pending or rejected.

8 Completing and archiving

Mark Completed

Use this when no further action is needed. The completion date is what the compliance figures are measured against, so mark it on the day the work actually finished. The button stays disabled while approval is pending or rejected.

Archive

Archiving removes a document from the active list. You must give **conclusion remarks** saying why — these are kept on the record and written into its history. Archived documents stay fully readable under **Archived Documents**; nothing is deleted.

Archived documents stop resolving by QR code. Scanning the slip of an archived document reports it as not found. Open it from the Archived Documents list instead.

9 Printing the routing slip

Open the document and choose **Print**. The slip carries the title, tracking number, QR code, and the full routing history in date order, oldest first.

Staple it to the physical folder. Anyone holding the folder can then scan the code and see the current status without asking anyone.

10 Reading the dashboard

The Home and Dashboard pages summarise where work stands. What the totals count depends on which office you belong to.

Whose documents you are counting

The **Office of the Administrator** and the **Office of the Secretary** see agency-wide totals. Every other office sees only the documents its own account created. Two people in different offices will therefore see different numbers on the same day, and both are right.

Compliance

SHOWN AS	MEANS
Compliant	Completed on or before the due date
Non-compliant	Completed after the due date
Exempt	No due date was set, so there is nothing to be late against

The compliance figures are clickable. Choosing **Non-compliant** opens the list of exactly those documents, so you can see which ones they are rather than only how many.

Overdue is calculated, not typed. A document counts as overdue when its due date has passed and it is not yet completed. Nobody sets that status by hand, and it clears itself the moment the document is completed.

11 Relief inventory and centres

Administrator

Logistics

Approver

Relief Inventory

Holds every item you can distribute, with its category, unit, and the quantity available. Add stock as it arrives. Available quantities fall automatically when a distribution is recorded — never adjust them by hand to match a distribution you have already entered, or the goods will be deducted twice.

Evacuation Centers

The places goods are sent to, each with its name and target area. Add a centre before you can record a distribution to it.

12 Recording a distribution

- 1 Go to **Distributions** and choose **New Distribution**.
- 2 Pick the **evacuation centre** and the **date**.
- 3 Enter the number of **families served**.

- 4 Add each item and quantity. The system refuses quantities greater than the stock on hand and tells you what is available.
- 5 Leave **Generate manifest** ticked to create a linked Relief Manifest document that can be routed and approved like any other.
- 6 Choose **Save**.

What happens on save

- A reference such as REL-2026-000010 is issued.
- Stock is deducted from inventory and the movement is written to the ledger.
- The Office of the Secretary is notified by bell and email.

Statuses

Draft	Recorded, not yet submitted
Pending Approval	Waiting for sign-off
Approved	Signed off — the person who recorded it is notified
Completed	Goods delivered and accounted for
Cancelled	Called off — the stock is returned to inventory

Cancelling returns the goods. Setting a distribution to Cancelled credits the quantities back to stock automatically. Reinstating it takes them out again, and is refused if the stock has since gone elsewhere. You never adjust inventory by hand for a cancellation.

13 Relief reports

Five views over the same data. Choose a period first, then the view that answers your question.

VIEW

ANSWERS

Distributions	Which operations happened, where, and for how many families
Goods	How much of each item went out
Centres	Which evacuation centres received the most
Trend	How activity moved over time, by day, week or month
Item movement	Every stock movement for one item — what came in, what went out, and why

Periods

Today, this week, this month, this quarter, this year, all time, or a custom range. If you enter a custom range backwards the system swaps the dates rather than returning nothing.

Cancelled distributions are excluded from the totals, and their stock is back in inventory, so the reports and the inventory always agree.

14 Administration

Administrator only

User Management

Create accounts, set the role and office, and tick **Can route documents** for Department staff who need it. Deactivating an account blocks sign-in immediately, including halfway through a sign-in already in progress.

The email address is the account's lifeline. A wrong address means no sign-in passcode, and therefore no access at all. Check it when creating the account, and again whenever someone reports they are not receiving codes.

Departments

Offices and their codes. The code becomes the prefix on every tracking number that office creates, so **PRS** produces **PRS-2026-000006**. Changing a code affects new documents only; existing numbers never change.

Mail Delivery Test

Sends a test message so you can confirm delivery is working before blaming the system for a missing passcode. Use this first whenever someone reports sign-in problems.

15 When something breaks

WHAT YOU SEE	WHAT TO DO
No passcode email	Wait a minute and check spam. Use Resend after 60 seconds. If it still does not arrive, ask an administrator to confirm the address on your account and run the Mail Delivery Test.
“Too many failed attempts”	Five wrong passwords within ten minutes. Wait a few minutes and try again, or use Forgot password .
Camera will not start	The address must be <code>https://</code> . On plain <code>http://</code> the browser refuses the camera. Type the tracking number instead.
Camera runs but will not read the code	Fill the frame with the code, hold steady, and give it good light. Printed slips read best flat rather than curled.
“Not available to you”	The document belongs to another office. Ask that office to route it to you.
Approve and Reject missing	Either you are not an approver, or the document is not awaiting approval. After a rejection the buttons return once the revision is routed back to an approver.
Mark Completed greyed out	Approval is still pending or was rejected. Resolve the approval first.
Signed out unexpectedly	Thirty minutes without activity ends the session. Sign in again.
Page will not load at all	The server may be off, or its address may have changed. Ask your administrator for the current address.

Written against the running system. Where this manual and the system disagree, the system is right — tell your administrator so this can be corrected.
